Hello,

As we discussed in the last session about our System Programming based project "Customised Virtual File System".

Please prepare documentation for the Customised Virtual File System project.

Project documentation should contain below things

1. Name of the project
2. Technology used
3. User interface used
4. Platform required
5. Hardware requirements
6. Description of the project
7. Data structures used in the project
8. Diagram of data structures used in the project
9. The flow of the project
10. Actual code of the project
11. After the code past screenshot of output which demonstrates every feature of our project separately
12. Before every function of our project, there should be one header which should contain below things as
 - Name of function
 - Input parameters
 - The return value of the function
 - Description of the function and its use in the project

At the end of this documentation please write answers of the below questions

1. What is meant by file system?
2. Which file systems are used by Linux and Windows operating systems?
3. What are the parts of the file system?
4. Explain UAREA and its contents.
5. Explain the use of the File Table and its contents.
6. Explain the use of InCore inode Table and its use.
7. What does inode mean?
8. What are the contents of Superblock?
9. What are the types of files?
10. What are the contents of the inode?
11. What is the use of a directory file?
12. How does the operating system maintain security for files?
13. What happens when a user wants to open the file?
14. What happens when a user calls lseek system call?
15. What is the difference between library function and system call?
16. What is the use of this project?
17. What are the difficulties that you faced in this project?
18. Is there any improvement needed in this project?

Explain the internal working of below system calls

(Write the solutions in the documentation)

1. open
2. close
3. read
4. write
5. lseek
6. stat
7. chmod
8. unlink

Add a screenshot of each above command which demonstrates its use.

Explain use of below commands

(Write the solutions in the documentation)

1. ls
2. ls - l
3. ls - a
4. rm
5. cat
6. cd
7. cp
8. mkdir
9. pwd
10. touch
11. stat
12. man

Write a small demonstration program for each above system call in the documentation.

For System calls please refer to "Advanced UNIX system programming by W Richard Stevens"

Please refer to the attached books for our getting more information about **File manipulations** and **File Systems**.

Please send a PDF of your documentation in the reply of the same mail till 16th January.

This documentation is very important to understand the code of our project.

As announced in our last session, please note the following important instructions carefully:

Sankranti Celebration & Group Photo

- Tomorrow 14th January we will be celebrating **Sankranti** together.
- A **group photograph** is planned to capture our memories.
- **Dress Code:** Kindly wear **black attire** compulsorily for the group photo.

Movie Plan – City Pride

- Students who have confirmed for the movie are also required to **wear black attire**.
- Please be **present in front of City Pride Theatre at 11:00 AM sharp**.
- Be punctual to avoid any inconvenience.

We request everyone to follow the above instructions strictly for smooth coordination and to make the event memorable.

Thanks & regards,

Piyush Manohar Khairnar
