

## Logic Building Assignment : 55

### 1. Write generic program to perform addition of two numbers

```
template <class T>
T Add(T no1, T no2)
{
    // Logic
}

int main()
{
    int iRet = Add(10, 20);
    printf("%d\n", iRet);

    float fRet = Add(10.5f, 20.3f);
    printf("%f\n", fRet);

    return 0;
}
```

### 2. Write generic program to perform subtraction of two numbers

```
template <class T>
T Sub(T no1, T no2)
{
    // Logic
}
```

### 3. Write generic program to perform division of two numbers

```
template <class T>
T Div(T no1, T no2)
{
    // Logic (handle division properly)
}
```

### 4. Write generic program to swap two values

```
template <class T>
void Swap(T &no1, T &no2)
{
    // Logic
}
```

```
}

int main()
{
    int a = 10, b = 20;
    Swap(a, b);

    float x = 3.5f, y = 7.8f;
    Swap(x, y);

    return 0;
}
```

### 5. Write generic program to find maximum of four values

```
template <class T>
T Max(T a, T b, T c, T d)
{
    // Logic
}
```
