

Logic Building Assignment : 13

Calculate Time Complexity of each program.

1) Print all numbers from 1 to N

```
#include <stdio.h>

void print_numbers(int limit)
{
    // TODO
}

int main()
{
    int limit;

    printf("Enter number : ");

    scanf("%d", &limit);
    print_numbers(limit);
    return 0;
}
```

2) Print all even numbers up to N

```
#include <stdio.h>

void print_even_numbers(int limit)
{
    // TODO
}

int main()
{
    int limit;

    printf("Enter number : ");

    scanf("%d", &limit);
    print_even_numbers(limit);
    return 0;
}
```

3) Print all odd numbers up to N

```
#include <stdio.h>

void print_odd_numbers(int limit)
{
    // TODO
}

int main()
{
    int limit;
    printf("Enter number : ");

    scanf("%d", &limit);
    print_odd_numbers(limit);
    return 0;
}
```

4) Find sum of first N natural numbers

```
#include <stdio.h>

int sum_natural_numbers(int limit)
{
    // TODO
    return 0;
}

int main()
{
    int limit;
    printf("Enter number : ");

    scanf("%d", &limit);
    printf("%d\n", sum_natural_numbers(limit));
    return 0;
}
```

5) Find sum of first N even numbers

```
#include <stdio.h>

int sum_even_numbers(int limit)
```

```
{  
    // TODO  
    return 0;  
}  
  
int main(void)  
{  
    int limit;  
    printf("Enter number : ");  
  
    scanf("%d", &limit);  
    printf("%d\n", sum_even_numbers(limit));  
    return 0;  
}
```
