

Logic Building Assignment : 16

1. Write a program to calculate the sum of first N natural numbers.

```
class Logic
{
    void calculateSum(int n)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.calculateSum(10);
    }
}
```

2. Write a program to check whether a given number is even or odd.

```
class Logic
{
    void checkEvenOdd(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.checkEvenOdd(7);
    }
}
```

3. Write a program to find the factorial of a number using a for loop.

```
class Logic
```

```
{
    void findFactorial(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.findFactorial(5);
    }
}
```

4. Write a program to reverse a number.

```
class Logic
{
    void reverseNumber(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.reverseNumber(1234);
    }
}
```

5. Write a program to count the number of digits in a given number.

```
class Logic
{
    void countDigits(int num)
    {
        // Write logic here
    }
}
```

```
class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.countDigits(7865);
    }
}
```
