

Logic Building Assignment : 18

1. Write a program to check whether a number is prime or not.

```
class Logic
{
    void checkPrime(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.checkPrime(11);
    }
}
```

2. Write a program to print all even numbers up to N.

```
class Logic
{
    void printEvenNumbers(int n)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.printEvenNumbers(20);
    }
}
```

3. Write a program to print all odd numbers up to N.

```
class Logic
```

```
{
    void printOddNumbers(int n)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.printOddNumbers(20);
    }
}
```

4. Write a program to find the sum of even and odd digits separately in a number.

```
class Logic
{
    void sumEvenOddDigits(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.sumEvenOddDigits(123456);
    }
}
```

5. Write a program to check whether a number is positive, negative, or zero.

```
class Logic
{
    void checkSign(int num)
    {
        // Write logic here
    }
}
```

```
class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.checkSign(-8);
    }
}
```
