

Logic Building Assignment : 21

1. Write a program to calculate the product of digits of a number.

```
class Logic
{
    void productOfDigits(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.productOfDigits(234);
    }
}
```

2. Write a program to count how many even and odd numbers are present between 1 and N.

```
class Logic
{
    void countEvenOddRange(int n)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.countEvenOddRange(50);
    }
}
```

3. Write a program to display all factors of a given number.

```
class Logic
```

```
{
    void displayFactors(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.displayFactors(12);
    }
}
```

4. Write a program to count total number of factors of a given number.

```
class Logic
{
    void countFactors(int num)
    {
        // Write logic here
    }
}

class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.countFactors(20);
    }
}
```

5. Write a program to print all numbers from 1 to N that are divisible by both 2 and 3.

```
class Logic
{
    void printDivisibleBy2and3(int n)
    {
        // Write logic here
    }
}
```

```
class Program
{
    public static void main(String args[])
    {
        Logic obj = new Logic();
        obj.printDivisibleBy2and3(30);
    }
}
```
